Viscovery reports best fiscal year

[News — Viscovery] Vienna, Austria, 14 June 2016 — Data mining and data visualization specialist Viscovery Software GmbH reports 2015 was the best fiscal year in the history of the company. Both revenues and equity ratio increased significantly, with the net profit margin rising to 37%. The overall share of consulting services in total revenues was about 15%.

This successful result was mainly due to business successes in life sciences which, in cooperation with parent company Biomax Informatics AG, continued to develop well in 2015. Besides ongoing project business with the Centre of Expertise for Chronic Organ Failure ([CIRO+](#)) in the Netherlands, substantial revenues resulted from new business in the biotech sector, in particular in the USA.

In addition to revenues from joint-offering projects, local project services and software maintenance, income was produced by new license customers, such as Mead Johnson in the USA, the Transport Accident Commission in Australia, the National Institute for Environmental Studies in Japan, the IT solution provider SHI International in the UK, and the Ministry of Finance in Singapore.

Numerous universities worldwide purchased Viscovery SOMine licenses for research, including the King's College London, Vilnius University, Universiti Sains Malaysia, and Shizuoka University in Japan.

About Viscovery

Viscovery Software GmbH, one of the first data-mining companies in Europe, is a leading vendor of predictive analytics software. Viscovery products are used by numerous customers worldwide in the fields of banking, insurance, telecommunications, industry, media and retail, as well as at research organizations and universities. Since 2007, Viscovery has been the data-mining specialist of the Munich-based Biomax group, which provides data analysis and knowledge management in the life sciences.

The Viscovery® SOMine Suite offers unique, patented technology for explorative analysis and predictive modeling of complex data using the combined power of self-organizing maps and multivariate statistics. The Viscovery team provides long-standing experience in diverse fields of applications, including life science analytics, Big Data exploration, finance indicator prediction, industrial process optimization and customer behavior modeling. Showcases for selected applications are available at www.viscovery.net/industries.
